CONTINUING EDUCATION SEMINARS CO-AUTHORED AND TAUGHT

CI® CERTIFIED BUILDING CONTAMINANT TECHNICIAN (CI®-BCT)

This 3-day training course is an in-depth education and hands-on training program in the field of Indoor Air Quality, Mold Remediation, Lead Contamination and Control and Water Damaged Buildings. Course designed for actual application and implementation upon completion and provides the knowledge to evaluate, remediate mold contamination and water damage, as well as other indoor air pollutants which are often overlooked and forgotten. The curricula provide extensive training in the critical areas necessary to ensure proper air quality and ventilation in Florida's environmental conditions, along with legal aspects and risk management related to each topic. Status: Course approved by the Department of Business & Professional Regulation as a method of obtaining the State Certified Mold Remediator and State Certified Mold Assessor upon licensing category being established in 2010.

CI® CERTIFIED BUILDING CONTAMINANT ASSESSOR (CI®-BCA)

This 3-day extension course is an in-depth education and hands-on training program in the field of Indoor Air Quality, Mold Remediation, Lead Contamination and Control and Water Damaged Buildings. Course designed for actual application and implementation upon completion and provides the knowledge to evaluate and create a repair protocol for mold contamination and water damage, as well as other indoor air pollutants which are often overlooked and forgotten. The curricula provides extensive training in the critical areas necessary to ensure proper air quality and ventilation in Florida's environmental conditions, along with legal aspects and risk management related to each topic. Status: Course approved by the Department of Business & Professional Regulation as a method of obtaining the State Certified Mold Assessor upon licensing category being established in 2010.

BUSINESS AND MANAGEMENT SKILLS

The course is designed to teach the student an overview of the following skills: business planning and organization, financial management, licensing, unemployment compensation, workers compensation law, construction lien law, safety regulations, risk management, construction contract liability, project management, how to establish employee relation programs, incentive programs, fair labor standards act, hazcom standards and other applicable labor standards. **Status; current course**

BUILDING MOLD, MOISTURE AND CONTAMINATES

Using site-related photographs and explanations, this is a detailed presentation that educates about the real issues associated with mold and air quality problems specific to Florida's tropical climate. Fundamental causes of mold growth, its potential dangers to air quality, possible liability issues associated with its existence, monetary damages, cleanup procedures, contractor & owner responsibility and how to prevent its growth. Proper material storage, construction techniques, and moisture control during the building process. The potential for hidden mold problems in new construction and existing structures, along with procedures to determine its existence and toxicity is also be presented. Procedures to remediate clean up and work with existing mold growth and examples of mold and moisture problems in structures with design deficiencies and improper maintenance procedures are shown by example. Liability and risk assessment issues associated with toxic mold and moisture infiltration as well as workers compensation considerations, workplace safety issues, and business practices is also be presented. **Status; current course**
